DID YOU KNOW?

AI-driven shortages have more than doubled hard drive costs making storage more expensive than ever.

SAVE TIME & MONEY

Archive to tape and free up your fast drives!

ROCK

Create today. Preserve for decades.

Projects move fast. Their value lasts much longer. Rock Vault moves completed work from everyday drives to dedicated LTO tape - creating a durable, offline archive designed for long-term preservation.

Keep your working drives working.

High-speed SSDs belong on active projects, not on a shelf holding yesterday's footage. Move finished jobs to LTO and reclaim valuable capacity without losing the ability to restore what you need later.

01 CLEAR SPACE

Archive completed shoots, masters and project files from existing HDDs and SSDs.

02 KEEP IT ACCESSIBLE

Request a restore when an old project returns for a new edit, grade or delivery.

From handover to verified archive.

01

INGEST

Transfer your existing HDD or SSD content to LTO tape, with an organised archive handover.

02

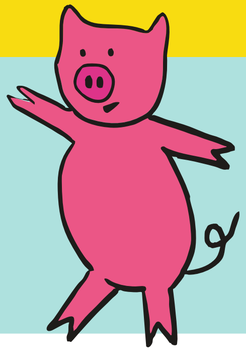

VERIFY

Perform per-file xxHash64 checksum verification to check data integrity during transfer.

03

RESTORE

Retrieve archived files from LTO and return them to working storage when required.

Scope, source-drive compatibility, turnaround and any required media are agreed before work begins.

An archive that can go offline.

When an LTO tape is removed from its drive and stored securely, it is physically separated from your live systems. That air gap helps protect archived work against network-born threats, accidental changes and unwanted deletion.

OFFLINE IS NOT THE SAME AS INVULNERABLE

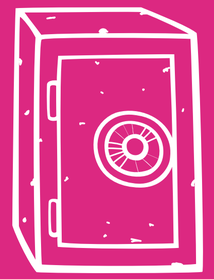

Sound archival practice also requires controlled storage, access procedures, periodic integrity checks and appropriate duplicate copies.

Cold archive. Active collaboration.

Use Rock Vault LTO for completed work that needs to be retained, and pair it with a cloud workflow for projects that still need regular access. Your team can keep current assets moving while finished projects are preserved offline.

ROCK VAULT LTO

Long-term, offline retention and restoration on request.
